Harvest Home News & Events

520 Baker Dr.
Tomball, TX 77375

Hello Everyone!

This is Lauren the Memory Care Coordinator. I was just popping in to invite all of you over to Inwood Crossing on June 22nd, between 10am-12pm to celebrate the longest day in support of Alzheimer's research and promote awareness.

We will be having a fun filled picnic celebration with games, photo booth, and more! I can't wait to see you all there!

Lauren XO XO XO

HAPPY FATHER'S DAY

Alzheimer's and Brain Awareness Month

10 Ways to Love Your Brain

Break a sweat.

Engage in regular cardiovascular exercise that elevates your heart rate and increases blood flow to the brain and body. Several studies have found an association between physical activity and reduced risk of cognitive decline.

Hit the books.

Formal education in any stage of life will help reduce your risk of cognitive decline and dementia. For example, take a class at a local college, community center or online.

Butt out.

Evidence shows that smoking increases risk of cognitive decline. Quitting smoking can reduce that risk to levels comparable to those who have not smoked.

Follow your heart.

Evidence shows that risk factors for cardiovascular disease and stroke – obesity, high blood pressure and diabetes – negatively impact your cognitive health. Take care of your heart, and your brain just might follow.

Heads up!

Brain injury can raise your risk of cognitive decline and dementia. Wear a seat belt, use a helmet when playing contact sports or riding a bike, and take steps to prevent falls.

Fuel up right.

Eat a healthy and balanced diet that is lower in fat and higher in vegetables and fruit to help reduce the risk of cognitive decline. Although research on diet and cognitive function is limited, certain diets, including Mediterranean may contribute to risk reduction.

Catch some Zzz's.

Not getting enough sleep due to conditions like insomnia or sleep apnea may result in problems with memory and thinking.

Take care of your mental health.

Some studies link a history of depression with increased risk of cognitive decline, so seek medical treatment if you have symptoms of depression, anxiety or other mental health concerns.

Buddy up.

Staying socially engaged may support brain health. Pursue social activities that are meaningful to you. Find ways to be part of your local community – if you love animals, consider volunteering at a local shelter. If you enjoy singing, join a local choir or help at an after-school program.

Stump yourself.

Challenge and activate your mind. Build a piece of furniture. Complete a jigsaw puzzle. Do something artistic. Play games, such as bridge, that make you think strategically. Challenging your mind may have short and long-term benefits for your brain.
